

AI-DRIVEN AUDIO DUBBING

Speaking your language.

Turn your back catalog into a global growth engine.

Turn your existing content into multilingual assets with AI-Powered dubbing and optional human QA. All built for scale.

It's not a black box; it's a true localization engine with full control when you need it.

With Mockingbird, you get:

- ✓ Batch workflows
- ✓ Expanded global audience reach
Human-in-the-loop tools
- ✓ Smart automation, flexible review
- ✓ Lifelike AI dubbed voices

Reach new audiences everywhere.

Have the final say

Quickly and efficiently approve or change all automated translations, making sure your content fits perfectly with your vision.

Faster turnaround

Automation can produce dubbed audio quickly, reducing the time required to release content in different languages.

Cut costs

Avoid hiring voice actors for each language, long or frequently updated content, or languages with a limited number of speakers.

Quality control

From error detection to future correction, automated quality control ensures that every dub meets your standards.

Seamless integration

Translated content is delivered straight to your storage, ready for download or integration into your applications.

Expand into new markets

Translate and localize your video content into any number of languages, opening the door to audiences all over the world.
